

SABIC PET GRADES FOR HEALTHCARE

SABIC® PCG PET80 and SABIC® PCG PET84

PET is a highly valued, economic packaging material, because it combines glass-like transparency and shatter resistance, with down gauging and light weighting potential which arises from its high strength. Health authorities around the world recognize PET's safety for pharmaceutical and medical applications. SABIC works in partnerships with converters and OEMs who make products for health care, in order to customize and provide both improved resins and solutions for customers.

SABIC has expanded its healthcare portfolio with pharmaceutical grades of PET polyester.

SABIC® PCG PET80 and SABIC® PCG PET84 are suitable for colorless and brown pharma bottles used with syrups and tablets. According to sustainability studies, PET pharma bottles are more sustainable than glass bottles.

SABIC® PCG PET80 and SABIC® PCG PET84 grades comply with the requirements laid down in the European Pharmacopoeia § 3.1.15, eighth edition, 2015. The grades have passed independent migration and leaching tests.
